

JOVI JUAN

SELECTED WORK EXPERIENCE

Graphics Director, Europe | The Wall Street Journal | 2013-2020

As the visual and technical lead for big story initiatives in the newsroom that found their way largely into the interactive sphere and print publications, I served as the art director and technical director for data visualizations, photographic and video projects. Other responsibilities included creating innovative technological implementations that helped the Journal respond more quickly to newsworthy events, as well as consulting with and advising editors and reporters on pitches and story briefs. I also managed daily workflow for interactive and static graphics for a region that stretches from Stockholm to Johannesburg.

Senior Graphics Editor | The Wall Street Journal | 2006-2013

Led the 13 person interactive graphics team in New York. Core responsibilities included designing and developing, in collaboration with reporters and editors, interactive graphics and immersive narrative presentations for WSJ.com. As the design lead of my group, I set the tone for the general experience of all interactive graphics. Other responsibilities included: overseeing the production flow of graphic content for a small, highly productive team of designers and programmers; developing a set of tools and processes that empower editors to contribute charts, photos and other interactive experiences to WSJ.com as a whole; hiring and mentoring a team that grew from just 5 people. In 2008, I worked closely with top Dow Jones executives and editors on the redesign of WSJ.com, at the request of Almar Latour, then Managing Editor and current CEO of Dow Jones.

Creative Director | SmartPros | 1999-2006

Oversaw design, information architecture, and technological implementation for a bi-coastal production team of 25 designers and 10 programmers. As the lead creative contact for all Smartpros clients, my responsibilities ranged from collaborative needs analysis, site conception to final design and user testing. Other responsibilities included high-level front-end and back-end development. Clients included IBM, Nortel Networks, Thule, and AIG.

Designer/Interaction Designer/ Developer | R/GA | 1998-1999

Involved in the creation of websites, enhanced CD-ROMs, kiosks and InterCast multimedia productions as a visual designer, information architect, and programmer. From detailed specifications, created appropriate information structures and visual directions. Programming responsibilities ran from low-bandwidth Shockwave movies to media-rich, cutting-edge productions. Clients included Intel, Kodak, Compaq, BBCAmerica, Auction Universe, and PBS.

Assistant to Donald Judd | 1992-93

Fabricated Cor-Ten Steel sculptures for his final Pace Gallery exhibit in 1993. Created various pieces of furniture. Worked on architectural restoration projects around Marfa, Texas. Led tours of the foundation for visitors and VIPs. Photography assistant to Todd Eberle for Judd's furniture catalog raisonné.
